

September 2024

Summary

Progress continues on the development of the Health System Catalogue. We now have a total of **191 suppliers** who have provided **241,062 active GTINs** for the catalogue. In addition, we continue to work with another 71 suppliers to get data sets completed for publishing.

Focus also continues on getting pricing information from suppliers who have only published item data to-date. The catalogue is steadily moving towards having a comprehensive set of data for Health NZ.

We are now starting to add images and documents to the data attributes in the HSC and would like to continue to build this important product information moving forward (*more on page 3*). We now have 10 suppliers with images and documents for their products.

The close relationship continues with GSI, our preferred publishing partner, as we continue to grow the catalogue across multiple product categories. The GSI media library service will also be utilised to bring images and documents into the catalogue, and we are working with GSI to make this process easier and more cost-effective for Suppliers.

Discussions continue with additional product category suppliers. We have 7 additional category suppliers live in the HSC, and 23 more progressing data preparation.

Thank you for your ongoing support as we develop the Health System Catalogue as the single source of truth for item & price information.

For further information or enquiries, please contact hsc@nzhp.health.nz

Scope of the HSC

The intention of the HSC is that it contains all products that are available for sale into Health NZ. Through this master data set, a number of opportunities are enabled, providing value to suppliers and Health NZ.

In order to develop the HSC as the master data set, it is critical that we get complete data sets from all suppliers, and that these are regularly maintained.

If you are unsure whether your products are suitable to include in the Health System Catalogue, please contact the HSC Supplier Engagement Lead.

If you haven't published your complete data yet, please talk to us!

Additional product categories

We now have 7 additional product category suppliers live in the HSC, and are working with another 23 to finalise their product data.

These categories include pharmaceuticals, clinical equipment, laboratory supplies, FF&E, uniforms, cleaning supplies, office supplies and food & grocery.

We are keen to get more data published to the HSC in the coming months as we continue to build to a comprehensive product catalogue for the Health NZ hospitals.

If you sell products to the NZ public hospitals, we would like to get your products into the Health System Catalogue, so please talk to us.

Requirement to publish and maintain data in the HSC

All medical device suppliers are expected to publish their complete data sets to the Health System Catalogue and for many suppliers, obligations are now included in Pharmac contracts.

Since the HSC is the primary “authoritative data source”, we need to have complete product information, in order to align it with other data sets used in Health NZ. The most important data alignment work is with the Oracle Financial system, since this is the system where purchase orders are raised, and invoices paid.

If you haven’t published your complete data sets as yet, please contact Ian Malone, the Supplier Engagement Lead for the HSC at ian.malone@nzhp.health.nz.

Publishing your product information to the Health System Catalogue is mandatory for all Suppliers of medical devices to Health NZ, and this will be a criteria for future supply contracts.

Please find attached in the next page a Joint Communication from Pharmac and Health NZ regarding the requirement to publish complete data sets to the Health System Catalogue.

URGENT: Health System Catalogue Requirement

2 September 2024

Medical Device Suppliers

Health New Zealand and Pharmac are committed to streamlining our procurement, purchasing and supply chain processes. To achieve this, collaboration across the sector is essential.

It is our intention for the HSC to be the primary place for contract managers, procurement teams and clinical procurement coordinators to find medical device items, pricing, and other relevant information. Serving as the primary product data source, the HSC will complement purchasing and information systems within Health New Zealand and Pharmac to support more consistent product information flow and reduce administrative requirements for all parties. Accurate pricing in the HSC will significantly enhance our efficiency, improve the accuracy of our purchase orders, and reduce time-consuming rework for all stakeholders.

All medical device suppliers to Health New Zealand are required to publish their complete data sets in the Health System Catalogue. This includes all products available for sale to Health New Zealand hospitals. If you have already provided a complete data set to the HSC, and are keeping it maintained, we sincerely appreciate your support. Your efforts are instrumental in our collective success.

For the remaining suppliers, it is important that this is completed as soon as possible, and your prompt action is greatly appreciated. Compliance will be tracked as a key performance indicator for suppliers. Future contracts will mandate that a complete data set to be consistently maintained in the Health System Catalogue. Formal escalation meetings will now begin for suppliers with incomplete data sets, beginning with our largest suppliers.

If you haven't published your complete data set to the HSC yet, please reach out to Ian Malone, the HSC Supplier Engagement Lead to progress. We are here to support you in this process. Contact Ian at ian.malone@nzhp.health.nz.

Kind Regards,

Andrew Davies
Manager, Devices Funding

Health System Catalogue

Images, documents & other product information

We are now adding images and documents to the product data in the HSC. The documents include items such as regulatory information, safety data sheets, instructions for use and product specifications.

The relevant documents will be different by supplier and by product range, but the information is very useful for those involved in contracting, procurement and product evaluation.

In general, the most relevant and widely used information should be the initial focus for suppliers to add to their product information.

Attaching relevant information to the product data in the HSC will provide significant value to HSC users, as well as creating efficiencies for suppliers, who are currently required to provide this information on an ad-hoc basis to multiple recipients.

We currently have 10 suppliers with images and documents for their products, and are now working with a second group.

The following pages show examples of information provided by two of our early adopters (Permobil and Evolutis).

If you would like to use the HSC as the central place to provide your product documentation, please talk to us!
